

How is Ecore green?

- We diverted **112 million pounds** of truck tires from landfills in 2019.
- Our products contain up to 95% post-consumer recycled content.
- Rubber scraps from our manufacturing process are collected and recycled back into our system.
- Metals extracted from the tires in the grinding process are recycled.
- We employ a closed loop chilling system, to recirculate water, conserving 17.5 million gallons of water each year.
- We recycle 100,000 lbs of office paper and miscellaneous materials per year.
- We have updated the facility to LED lighting, which reduces our greenhouse gas footprint.
- We volunteer with the Lancaster Adopt-a-Block program to help keep our community clean.
- We've upgraded our kitchenware from plastic to biodegradable.

Ecore's proprietary processes
use 40% less energy
than standard industry processes.
